

Wabo®TransFlex

Molded Rubber Segmental Expansion Joint System

Features	Benefits
• Staged Construction	Segmented joints section allows for minimizing traffic down time during installation and maintenance. Panels can be replaced in lieu of entire system.
• Sound Dampening Design	Provides a low noise and smooth riding surface when transitioning from roadway across the joint.
• Durability	Combines the strength of steel and the flexibility of elastomeric rubber providing a durable surface under traffic
• Ease of Installation	No welding required on site, tongue and groove connection.

DESCRIPTION:

Wabo®TransFlex is a steel reinforced elastomeric molded rubber expansion joint system. Features a tongue and groove fittings for tight end-to-end mating across decks and at curbs. Ideal for new deck construction, rehabilitation projects and supports skew angles. Wabo®TransFlex system creates a level smooth riding, wear-resistant surface while accommodating anticipated thermal movements

RECOMMENDED FOR:

- Shallow concrete depth applications Bridges, decks and ramps
- Expansion joint applications with maximum movement of 13 inches
- New construction or repair and maintenance of existing joints

PACKAGING/COVERAGE:

- Standard 6-foot panel lengths are provided with the exception of Model 1300, which are 4-foot panels.
- Sikaflex-NP1 is an elastomeric compound used to seal the edge voids. Sealant is supplied in 10.1 oz tubes.
- Bolt hole cavities are typically filled with WaboCrete® II (Part A & B)
- Includes bolting hardware and adhesive bedding tape.
- Optional factory manufactured upturns
- Coverage for all components will depend on void

Physical Properties

The steel angles embedded in the molded neoprene panels are formed of ASTM A36 steel. The neoprene block rubber shall have the physical properties conforming to the following requirements:

PHYSICAL PROPERTY	ASTM TEST METHOD	REQUIREMENTS
Tensile Strength, min	D 412	1,800 psi
Elongation at Break, min	D 412	400%
Hardness, Shore A	D 2240	45 +/-5
Compression Set, 22 hrs@158F	D 395	20%
Oil Swell, 70 hrs. @212°F(100°C)	D 471	120%
Ozone Resistance	D 1149	no cracks
Low Temperature Brittleness	D 746	not brittle

Requirements shown reflect test results taken immediately following compound mixing. Results may vary and are not indicative of product performance if specimens are skived from finished, molded parts.

APPLICATION:**INSTALLATION SUMMARY:**

- **Newly placed concrete:** the joint interface must be dry and clean (free of dirt, coatings, rust, grease, oil, and other contaminants), sound and durable. New concrete must be cured (minimum of 14 days).
- **Aged concrete:** loose, contaminated, weak, spalled, deteriorated and/or delaminated concrete must be removed to sound concrete and repaired prior to placement.
- For proper breakout preparation and anchor placement refer to installation guide.
- Install Wabo®TransFlex units starting at the curb or factory made transition .
-
- Re-torque all hardware approximately 30 minutes after tightening.
- Fill bolt hole cavity with WaboCrete®II and voids between TransFlex sections and vertical face of breakout with SikaFlex-NP1 Sealant.
- Reference Installation Procedure for complete install instructions.

FOR BEST RESULTS:

- Install when concrete substrate is clean, sound, dry, and cured (14 day minimum).
- Do not install if the joint's anticipated movement will exceed the system's movement range.
- Do not allow any of the components to freeze prior to installation. Store all components out of direct sunlight in a clean, dry location between 50°F and 90°F. Do not store in high humidity.
- Do not install when surface temperature is less than 40°F.
- Shelf life of chemical components is approximately 1 year.
- Recommend to inspect system every six months and repair areas as needed.
- Make certain the most current version of the product data sheet is being used.
- Please consult the website (www.watsonbowmanacme.com) or contact a Watson Bowman Acme representative.
